

Java Fundamentals - Lesson 01: Introduction

Welcome to Axisora Forge Academy. In this lesson, we cover core Java fundamentals.

1. What is Java and How Does it Work?

- Java is a high-level, class-based, object-oriented language.
- Write Once, Run Anywhere (WORA) via the Java Virtual Machine (JVM).

2. Key Components of Java Architecture:

- JDK (Java Development Kit): Compiler, debugger, core tools.
- JRE (Java Runtime Environment): Libraries + JVM to execute code.
- JVM (Java Virtual Machine): Executes bytecode on hardware.

3. Core Data Types and Variables:

- Primitives: byte, short, int, long, float, double, boolean, char
- Reference types: String, Arrays, Classes, Interfaces

Practice coding exercises and quizzes in the assessment module.
